

# Bring your campus together with a unified card solution

## A single platform for college & university campuses

Colleges and universities are responsible for creating a positive educational experience. This means securing your physical environment and protecting the faculty, staff, and students that move through your facilities every day.

Traditional physical security systems are designed to protect things, like buildings and expensive equipment, and to secure sensitive areas on campus. These systems can suffer from compatibility issues or limited connectivity between various applications and can become complicated and costly to maintain.

Today's campuses require a unified security solution that helps secure both people and facilities. Genetec™ Security Center is a unified, single platform solution that gives you seamless control over all operations and provides you with the intelligence to respond rapidly to emerging situations.

## Keep campuses safe

Teaching, research, and learning are at their best when everyone feels secure. You need a proactive security solution that enables you to establish and track access, lockdown a facility in an emergency, and integrate smoke, intrusion, IoT alarms, and gunshot detection technology.

## Increase intelligence

As colleges and universities increase in size and complexity, maintaining an all-encompassing view of your campus can be a challenge. You require a physical security system that provides security personnel with the information necessary to respond quickly and effectively to any situation.

## Secure your campus

Educational institutions are made up of multiple facilities, including research labs, dormitories, libraries, and parking lots, collected in a single area or spread over multiple sites. To secure your entire institution, you need a security system that unifies alarms, IP video surveillance, access control, and automatic license plate recognition within one intuitive solution.

## A unified campus card safety system from Genetec

Using a unified card system throughout your campus helps you secure your physical environment and protect faculty, staff, and students.

### Integrate your existing infrastructure

Because our open architecture security solutions support seamless integration with third party security and business systems, you can offer additional automated services across your campus through your unified card system. The result is improved security and convenience for everyone.

### Use it anywhere and everywhere

In addition to controlling access to facilities and tracking movements across campus, unified cards can be used everywhere from the library to the laundry room. Rather than carrying cash on campus for parking, copying, and vending, students are also able to pay simply by using their cards.

### Understand your environment

As card usage increases on campus, your overall picture of how your institution runs will also increase. To better understand your environment, Genetec solutions can help you manage and analyze the additional data being collected by your unified campus card system. Then, when you identify under- or over-utilized areas on campus, you can develop better business and security strategies that maximize the use of space and help keep everyone safe.
